

YOU'RE INVITED TO

# HARBOUR IT AND NETAPP TECHNOLOGY BREAKFAST

Join Harbour IT and NetApp over breakfast for an insight to the four major trends in the industry in 2015 and how these impact the choices you have.

- Cloud is one of the biggest infrastructure business model disruptions taking place in the industry.
- Data is growing rapidly. New approaches are being created, generating application-level decisions with big implications to storage infrastructures.
- With every single one of us carrying a hand-held device – iPhones, iPads, Android devices - our expectations of organizational IT departments are rising when it comes to mobility. We want access to all of our information and our applications through any device.
- Flash changes the way performance can be delivered to applications from storage systems and needs to be factored into architecture decisions.

Hear how NetApp are continuing to evolve their solution set to address these trends using a single unified, scale out platform.

DON'T MISS OUT AS SEATS ARE LIMITED

NetApp
